

- ISRP Inventory System** – is ideal for small to mid-sized warehouse order fulfillment operations. The application is comprised of four fully integrated functions: Inventory, Shipping, Receiving and Picking. Know exactly when items are received, picked, put away, moved or inventoried. Manage complete inventory from order receipt to shipping. When a "Bigger WMS" is just too much, ISRP is just "Right".

- Queuing System** – When a client or customer first enters a premise, they will always be in a state of observation, trying to figure out what they are supposed to do and where they are supposed to go. A ticketing kiosk will inform your customers will know exactly where to go for which ever service they select. It will manage customers. They will no longer push ahead in line, nor can they lose their spot. Priorities will be handled faster. System records everything from waiting time to serving time will be recorded. You can rest assured knowing that the peak hours are getting handled competently by your staff.
